

ELBI PREMIUM PLUS

Epicondylitis brace

SRT 216

Indications

Used for epicondylitis, tendonitis, elbow joint oversteering (tennis elbow & golfer's elbow).

Description

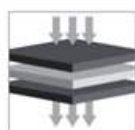

Brace made of textile, and comprises:

- Targeted compression pad at the epicondyle, that absorbs forces exerted on the tendon
- fastening strap with buckle. Hook and loop fastener.

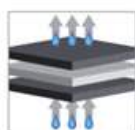

Length: 28 cm. This orthosis is a support for the elbow and can be used both as orthopaedic treatment in minor ailments and for recovery in the post immobilization period. Due to the fastening strap with buckle, it can be adjusted to provide optimal compression and can be used in sporting activities that overload the elbow, such as golf.

Composition

Three-layer laminated textile. The laminated textile ensemble behaves like a moisture regulator, wicking the moisture outward.

Air Transfer

Water Transfer

- Available in Black

- Cut out to improve comfort when flexing the elbow

- Adjustable hook and loop fastener with buckle
