

# TRIASOR 02

## Back support

SRT 108

### Indications

Used for incipient intervertebral disc herniation, moderate low back pain, postoperative, and for osteoporosis, sciatica and arthritis.

### Description

The support is made of breathable textile, and incorporates:

- 4 integrated plastic stays for support
- one plastic lumbar pad with cotton liner
- 2 6 cm criss-cross elastic straps around the waist providing increased stability and compression.

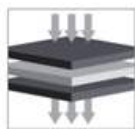

Hook and loop fastener on the front side.  
Width: front 19 cm, back 30 cm. The inside pad has 8 leaf springs arranged on 2 rows that have a lumbar massage effect.

4 plastic stays stabilize the lumbar region, slightly reducing lordosis, and the compression exerted by the elastic bands reduces muscle tension and pain.

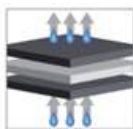

### Composition

Breathable three-layer laminated moisture-wicking textile.

50% polyester, 33% polyamide, 17% elastane

Air Transfer

Water Transfer

- Available in Black

- elastic straps around the waist providing a better stability and compression
- the inside pad has leaf springs that produce a lumbar massage effect

- Supportive lumbar pad is fitted with springs which produce a lumbar massage effect.
